ALLOWANCE

1. Claims 3-21 and 27 are pending in the present application. Claims 22-26 and 28-33 are cancelled.

Response to Arguments

2. Applicant's arguments, see Remarks (pages 19-21) filed on 13 March 2006, with respect to claims 3-21 and 27 have been fully considered and are persuasive. The rejection of these claims has been withdrawn.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Robert J. Webster on 02 October 2006.

The application has been amended as follows:

Please cancel claims 22-26

Amend claim 16 as follows:

On page 16, line 6 delete "judging" and insert -- determining --

Amend claim 17 as follows:

On page 10, line 5 delete second occurrence of “and”

On page 10, line 9 after “subscriber” insert -- ;and displaying the current storing amount and the storing amount contents when the balance storing data is stored. --

Amend claim 27 as follows:

On page 15, line 16 delete “and”

On page 15, line 19 after “received” insert -- ;and displaying balance storing information.

Allowable Subject Matter

4. The following is an examiner’s statement of reasons for allowance:

The instant invention defines an apparatus and method for storing electronic money. The apparatus and method requires a radio signal and comparison of extracted numbers in order to authorize the storing of the electronic money. The closest prior art, Takami et al. U.S. Patent 6,536,661 teaches an electronic money transaction system with radio transmitter and receiver using a portable phone. Takami teaches processing a transaction with an IC card by comparing a serial number extracted from the received signal with a previously stored serial number if it is determined that the received signal corresponds to balance storing information and storing a

balance storing data extracted from the balance storing information into the memory block if the extracted serial number and the previously stored serial number are determined to be the same and the balance storing information transmitted from the radio signal receiving block is determined to be a proper signal; and a non-contact block for storing a balance storing amount into the memory block using a card storing unit and reading a balance storing amount of the memory block when paying the money (column 11, line 40 thru column 12 line 58 and Figures 13-15).

However, the prior art of record fails to teach an apparatus for storing electronic money comprising: a radio signal receiving block for receiving a radio signal and determining whether the received signal corresponds to general information or balance storing information and a computation logic block for comparing a serial number extracted from the received signal with a previously stored serial number if it is determined that the received signal corresponds to balance storing information, and storing balance storing data extracted from the balance storing information into a memory block if the extracted serial number and the previously stored serial number are determined to be the same as discussed on pages 7-11 of the specification. These elements in combination with all of the other elements of the claims are not taught or fairly suggested in the prior art of record. For this reason claim 3 is deemed allowable over the prior art. Claims 10, 16, 17 and 27 are substantially similar to claim 3 and are allowed following the same reasoning. Claims 4-9, 11-15 and 18-21 are allowed for their dependency.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
